Module 5.2
Professor: Sue Sampson

Estimated Cycle Time: 160 minutes (2hr 40 min.)

- Optimize my processes:**
- **Use a meal planning application** - I could use a meal planning app to eliminate the ~10 minutes it takes to plan meals by having recipes in the application to choose from. I can also save ~15 minutes by being able to add items to the list by selecting them from the recipes I choose. This will also assist with sorting the items into their respective categories.
 - **Workflow Orchestration** - Check the store information online to determine peak hours, and avoid shopping during busy times of the day. Plan meals around weekly deals and items already on hand. Check expiration dates on items to avoid spoiled food, and ensure thorough inspection of all produce.
 - Governance Models**- Check the store information online to determine peak hours, and avoid shopping during busy times of the day. Plan meals around weekly deals and items already on hand. Check expiration dates on items to avoid spoiled food, and ensure thorough inspection of all produce.
